

BRIXSONN M. ROMERO

GoHighLevel (GHL) Automation Engineer | AI-Assisted Developer

Naga City, Camarines Sur, Philippines | +63 948 571 6293 | brixdodd07@gmail.com | Open to remote worldwide: full-time, part-time, or contract

web-portfolio-chi-steel.vercel.app | github.com/doodddles07 | linkedin.com/in/brixsonn-romero-0b18b9327

SUMMARY

GoHighLevel automation engineer and AI-assisted developer. Shipped 5 client platforms in 6 months for a Singapore automation company: a wine and spirits operations hub carrying roughly 10,000 customers in one CRM, a live music booking agency, a members club, a condominium portal, and a golf concierge serving bank card programs across Asia. The GHL side covers workflows, triggers, pipelines, sub-accounts, and the LeadConnector API. The code side covers Node.js, Express, MongoDB, PostgreSQL, and REST APIs. Third-party work includes Stripe, WhatsApp Business API, ElevenLabs voice AI, and chat assistants built on ChatGPT, Grok, and Hermes. B.S. Computer Science, cum laude, 2026. Open to remote work worldwide, and ready to learn whatever stack a team runs; most of the tools here were learned on live client work.

TECHNICAL SKILLS

- **CRM & Workflow Automation:** GoHighLevel (email campaigns and broadcasts, drip sequences, email templates, workflows, triggers, pipelines, opportunities, custom fields and custom values, calendars, sub-accounts, snapshots), LeadConnector API, webhooks, OAuth 2.0
- **Channels & Social Integrations:** WhatsApp Business API into GoHighLevel, Facebook Messenger and Lead Ads, Instagram DM, X (Twitter), TikTok, Google Business Profile messaging, SMS and email, all landing in one GHL conversation inbox
- **Conversational & Voice AI:** AI chatbots inside GHL conversations, ElevenLabs voice AI, OpenAI ChatGPT API, Grok, Hermes, Claude API
- **Languages:** JavaScript, TypeScript, Python, SQL, HTML, CSS
- **Backend:** Node.js, Express.js, FastAPI, Prisma, Mongoose, REST API design, MVC architecture, JWT authentication, data modeling
- **Frontend:** React, Next.js, React Native, Vite, Tailwind CSS, Zustand
- **Databases & Backend Services:** PostgreSQL, Neon, Supabase, Firebase Auth and Firestore, MongoDB and MongoDB Atlas, MySQL, pgvector
- **Payments & Integrations:** Stripe, WooCommerce, Lazada, Shopee, Google Calendar API, Groq
- **CS Fundamentals:** Data structures, algorithms, system design, database schema design, route optimization with Google OR-Tools
- **AI-Assisted Development:** Claude Code daily, subagents, agent skills, context and prompt design
- **Tooling & Deploy:** Git, GitHub, Railway, Vercel, Render, Cloudflare R2, Sentry error monitoring, Postman

PROFESSIONAL EXPERIENCE

Freelance GHL Automation & Backend Developer, Digital Benefits Pte. Ltd. - Singapore (Remote) | Feb 2026 - Jul 2026

- **Beeva, wine and spirits retailer (Full Stack, GHL Automation, QA):** Operations hub that pulls every order and stock level out of WooCommerce, Lazada, and Shopee into one system, then splits the work across office, driver, and warehouse portals. Roughly 10,000 customers sit in a single GoHighLevel CRM. Delivery routes are solved in Python with Google OR-Tools, and drivers upload proof-of-delivery photos from the road. Stack: React, Vite, Express, PostgreSQL, Python, FastAPI, OR-Tools, Leaflet, GoHighLevel.
- **VAMP, live music booking agency (GHL Automation, Integrations):** Wired GoHighLevel workflows to run the nightly booking cycle across venues, covering lineups, contracts, and musician payouts. Musicians confirm gigs inside WhatsApp, where an AI assistant answers questions about their own bookings and pay. Stack: Next.js, TypeScript, Express, Prisma, PostgreSQL, GoHighLevel, WhatsApp Business API.
- **Singapore Recreation Club (Full Stack, GHL Automation, QA):** Club platform for facility, dining, and event bookings, with guest registration and QR check-in at the front desk. Owned the MongoDB data model and JWT auth behind all 3 booking types, synced member records to GoHighLevel, and set up a chatbot for member queries. Scheduled jobs close finished bookings and release expired slots without staff touching them. Stack: Node.js, Express (MVC), MongoDB, JWT, GoHighLevel, Railway.
- **The Meridian, condominium portal (Backend, Security, GHL Automation):** One system joining residents, management, and the guardhouse. Residents book facilities, pay deposits, register visitors with QR passes, and file maintenance tickets.

Guards verify passes at the gate and management approves requests, and every action lands in all 3 views without a manual sync. Stack: Node.js, Express, MongoDB, Mongoose, JWT, GoHighLevel, Railway.

- **Apexlynx, golf concierge across Asia (Backend, Integrations, GHL Automation):** Tee-time booking for premium golf, including the golf programs banks offer their credit card members. Four separate portals for card members, golf clubs, bank call centers, and operations all run off one booking flow. Stripe takes payment, Google Calendar holds the tee times, a GoHighLevel automation engine drives the WhatsApp and email conversations, and every booking action is logged. Stack: Node.js, MySQL, Stripe, Google Calendar API, GoHighLevel, Railway.

Data Encoder, Dept. of Social Welfare and Development - Camarines Sur, Philippines | 2022 - 2025

- Kept beneficiary and program records accurate across large government datasets, where one wrong entry delays a family's benefit payment. Handled intake, validation, and correction of records used for service delivery.

PROJECTS

CortexVault, private RAG knowledge base | cortex-vault-web.vercel.app

- Answers questions from a user's own uploaded notes and PDFs, and every answer cites the exact chunk it came from. Keyword and vector search run together, then an LLM re-ranks the fused results. Auth includes session revocation, account lockout, and TOTP two-factor. Stack: Next.js, FastAPI, Neon Postgres, pgvector, Groq, Cloudflare R2, Sentry, Vercel, Render.

North Star, auto parts storefront | north-star-tan.vercel.app

- **Built around one hard problem:** whether a part actually fits the buyer's car. The shopper enters their vehicle once, then every listing, filter, badge, search result, and cart line is checked against a fitment table of makes, models, and model-year ranges. Turn the filter on and 27 parts narrow to the 11 that fit, with every facet count recalculated. Stack: Next.js 16, React 19, TypeScript, Tailwind v4, Zustand, Motion, Vercel.

SyncMind, AI meeting assistant | sync-mind-three.vercel.app

- Takes a meeting recording and returns a transcript, plain-language notes, a task list with owners and due dates, a follow-up email, and calendar reminders for every deadline. Anything the model guessed is marked as a guess. Stack: Next.js, Supabase, Groq, Sentry, Vercel.

ScholarForge AI, study tool | scholar-forge-ai.vercel.app

- Turns a PDF or slide deck into quizzes, flashcards, and practice exams that run entirely on-device. Parsing, storage, search, and spaced-repetition scheduling all happen in the browser. The server only holds the API key and checks that each question cites a real passage. Stack: React, TypeScript, Vite, Dexie/IndexedDB, Firebase Auth and Firestore sync, Gemini, Vercel.

StayFlow, residential community app | stay-flow-alpha.vercel.app

- Facility booking, restaurant reservations, digital guest passes, event sign-ups, and announcements, with separate secure logins and dashboards for residents, staff, and management. Stack: React, Tailwind CSS, Node.js, Express, Prisma, Neon Postgres.

The Lumina, property management platform | the-lumina.vercel.app

- Three connected portals where residents book facilities, register guests, track parcels, report defects, and pay deposits through live Stripe checkout. Every action appears instantly for managers and guards. Stack: JavaScript, Node.js, Express, MongoDB Atlas, Stripe, Vercel.

CYA Daily Verse, devotional web app | cya-dv.vercel.app

- Daily Bible verse, reading plans, challenges, prayer wall, and events for a youth ministry, plus a mood finder that suggests Scripture based on how the reader feels. Verses come live from public Bible sources. Stack: Next.js, React, TypeScript, Tailwind CSS, MongoDB, Vercel.

Also built: ResqYOU, emergency response and locator system with shortest-path routing; CYA FaithWear, full stack e-commerce from catalog to checkout, built at Ateneo de Naga University; NagaMed, mobile clinic booking and nearby-clinic discovery driven by usage analytics.

CERTIFICATIONS

- **Anthropic (7):** AI Fluency: Framework & Foundations; Building with the Claude API; Claude Code 101; Claude 101; Introduction to Claude Cowork; Introduction to Subagents; Introduction to Agent Skills

EDUCATION

B.S. Computer Science, Cum Laude, Naga College Foundation, Inc. | 2022 - 2026

- Dean's Lister, 2022 - 2026. CCS Start-Up Bootcamp with LGU, 2024. Idea2Startup Bootcamp, 2023.
